

THE UNIVERSITY OF
SOUTHERN MISSISSIPPI.

GULF COAST RESEARCH LABORATORY

\$20 CAN CHANGE A LIFE

Twenty dollars can have a lifelong impact at USM's Gulf Coast Research Laboratory. Board one of our university research vessels for a tour of coastal habitats with our team of educators. Participants experience hands-on activities in marine science as we trawl to sample the diversity of animals that live in coast waters. Customize the second half of your program by choosing:

- **BEACH HABITAT**
- **PLANKTON IDENTIFICATION**
- **SHARK BIOLOGY (add \$10 per participant)**

Participants gain a deep understanding of the importance of dynamic coastal habitats, marine plants and animals and how this ecosystem plays a role in their own lives.

Three hours that last a lifetime.

Find more information about this and a variety of other rich programs offered at the Marine Education Center.
